

Design jostens Defined

Check out Trendy and Cool Layout #7363 (or 8363/9363 depending on the trim size of your yearbook). This layout becomes a work of art with the right photos and text. We admit we did cheat with the shadow on the drop cap M. It was done in InDesign as opposed to PageMaker. But the rest of the layout could work in either one.

Looking for lots of photos? This Trendy and Cool design (#7372/8372/9372) is just what you're after. With 16 photos you have the chance to take some big steps toward a goal of getting everyone in your school in your yearbook numerous times.

And if you want even more, you could easily change the dominant photo to a feature layout of its own with four pictures and additional captions. The possibilities are endless and are limited only by your imagination.

Another thing to remember when you are looking at these layouts: they are really successful because of the quality of the photos (national award winners) we have used.

Bringing you the hottest trends in design each and every month. This month: new Trendy and Cool PageSurfer designs that you already have on your computer. No muss, no fuss! Enjoy.

When we ask what things advisers would most like help with, designing pages that are cool and up to date is usually at the top of the list. So this year, Jostens has added an entirely new design category to our popular PageSurfer layouts—Trendy and Cool.

These layouts will work in any book. And don't be afraid of them because you think they have too much copy. You can always change these designs to suit the way you want your book to look.

If you see a part of a PageSurfer design that you like and would like to use it on your page but it is not available in Click'N'Go—no problem. Just open the Trendy and Cool layout the element is in (like this quote box at right) and copy and paste it (before you add photos) into your layout. That's all there is to it!
